

Captain Jasu — Make and Print List

3 pieces to print, 3 to make by hand. Everything on this sheet is built in-house; everything bought is on the shopping list.

THIS FILE IS GENERATED FROM `outfits.yaml`. That file's components: `list` is the source of truth. Do not edit this sheet to record a decision — edit `outfits.yaml` and run `./tools/build-lists captain-jasu`. Sizes are approximate and several are estimated from assumed dimensions; confirm against the real patterns and against the performer before committing to a print run.

3D printed

Printed parts come out identical, so **all mismatch is painted on**. That is the rule this whole section turns on.

1. A180 blaster pistol

Printed ×1. *Not started.*

Two-tone: bright polished steel forward, black at the back. Six vent holes near the muzzle, fluting part way back, mounting rail with a knurled knob, chequered raked grip.

The real-world original — the A180 Jyn Erso carries in *Rogue One*.

THIRD-PARTY REFERENCE. Replace it with a photograph of our own printed build as soon as one exists: for anything physically built the reference is a photograph of the build, not a render.

Size	~230 to 250 mm overall, muzzle to grip heel. CHECK IT IN HER HAND BEFORE PRINTING THE FINAL — a full-size pistol reads noticeably larger on a 155 cm frame, and this is the one prop that must not look like it is wearing her.
Colour	 Bright polished steel, forward half
Accent	 Near-black, rear half and grip
Finish	THE ONE CLEAN THING IN THE FILM. Sand and fill the layer lines properly, then polish — everything else in this production is dulled and distressed and the palette rule protects this. No wash, no weathering, no dry-brushed grime. Serviced, not battered.
Method	Print in sections, muzzle along the build axis so the six vent holes and the fluting do not need support through their openings. The knurled knob on the mounting rail is the detail most likely to be lost at a coarse layer height — print it separately if it is.

From the specification: The weapon Jyn Erso carries in *Rogue One*. Reference at [reference/props/a180.jpg](#). Two-tone — bright polished steel forward, black at the back, six vent holes near the muzzle, fluting part way back, mounting rail with a knurled knob, chequered raked grip. IT MUST FINISH BRIGHT AND CLEAN. Everything else in

this production is dulled and distressed; this is the one thing she looks after, and the palette rule protects it. Photograph the build and replace the third-party reference image.

2. Bone horns for the headdress

Printed ×2. Not started.

THE HORN AUTHORITY, cut from portrait.png above the collar. 46% and 53% of head height, one blunt-tipped and one pointed — the only plate compliant on every point of the 2026-08-04 ruling.

AUTHORITATIVE FOR THE HORNS AND NOTHING ELSE. The approved front is a **TRUE MİRRORED PAIR** and must not be used for them, and headdress.png shows three on the visible side and is out of spec.

Size	~75 to 110 mm each, measured along the curve — a third to a half the height of her head. One slightly the longer of the two.
Colour	 Pale bone, yellowed with age
Accent	 Deeper ochre, settled into the grain and the base
Finish	MATTE AND SMOOTH. Never polished, never carved, never ridged or banded, never set in metal. They are trophies taken off what the akk kills; a worked finish turns them into jewellery and collapses the reading. Age them with a thin ochre wash pulled into the grain and wiped back off the high points — the yellowing is what sells them as old.
Method	PRINT AS TWO SEPARATE MODELS, NEVER ONE MODEL MİRRORED. This is the printing trap recorded in Costume-Build-Method: a printer produces a perfect matched pair by default, and a matched pair reads as a manufactured ornament rather than as two things taken off two kills. Both curved, one blunter and one pointed.

From the specification: Pale bone, matte, YELLOWED WITH AGE. Never polished, never carved, never set in metal — they are trophies from what the akk kills, and a worked finish turns them into jewellery and collapses the reading. TWO ONLY, ONE EACH SIDE, each a third to a half the height of her head. ALIKE IN CURVE, COLOUR AND SIZE, AND NOT THE SAME OBJECT — both curved, one blunter and one pointed, one slightly the longer. SMOOTH, never ridged or banded. PRINT THEM AS TWO SEPARATE MODELS, NEVER ONE MODEL MİRRORED. This is the printing trap recorded in Costume-Build-Method — a printer produces a perfect matched pair by default, and a matched pair is a manufactured ornament rather than two things taken off two kills. SPEC SETTLED BY THE PRODUCTION DESIGNER 2026-08-04. The authority is source/artwork/portrait.png, the only plate that satisfies it on every point. The approved front is a **TRUE MİRRORED PAIR** — verified by flipping one horn onto the other — and must not be used for the horns.

3. Whistle on a cord

Printed ×1. *Not started.*

Small, plain, dark, on a thin cord.
A tube with a mouthpiece and nothing else — no decoration, no chain, no fob.

Size	~45 to 55 mm long. Small enough to close a hand around, and small enough that it is not obviously a costume piece at distance.
Colour	 Dull dark metal, brass gone brown with age
Accent	 Rubbed brighter where a thumb has worn it for years
Finish	CHEAP-LOOKING AND MUCH HANDLED. This is the hero prop and it must not look like one. Wear it at the edges and the mouthpiece, leave the recesses dark. It is her entire command structure and it is worth nothing to anybody else — that contradiction is the whole point, so resist every instinct to make it handsome.
Method	Cord at the throat, not a chain. THERE IS EXACTLY ONE AND IT IS AT HER THROAT — the belt carries no second whistle.

From the specification: THE HERO PROP. Small, cheap-looking, much handled, worn at the throat. It is her entire command structure — she whistles and the beast comes, she whistles and it kills — and it is worth nothing to anybody else. A sourcing guide written from the photographs listed it as a "vintage keychain fob". It is the most important object she owns. THERE IS EXACTLY ONE, AND IT IS AT HER THROAT. Qty 1, and the belt carries no second whistle — a generated test on 2026-08-03 came back wearing two, and two makes it an ornament instead of an instrument.

Made by hand — not printed

Do not print these. Each one has to move, flex or be fitted to the performer, and a printed shell is the specific failure recorded against them.

1. Shoulder mantle

Made ×1. *Not started.*

THE AUTHORITY ON THIS SURFACE.
Irregular crazing and wear, heavier at the shoulder fold — not a regular diamond quilt and not a lattice, both of which have come back from generators and are wrong.

The silhouette — a sharp upswept point at each shoulder, rising at the back into the stand collar.

Size	Covers both shoulders and the upper chest, rising at the back into the stand collar. A sharp upswept point at each shoulder, clearing the shoulder line by ~40 to 60 mm. Scale it off HER, not off a pattern — at 155 cm a mantle drafted to a standard block swamps the figure and reads as armour she is borrowing.
Colour	 Warm dark brown
Finish	Fabric, not a finish — the surface must be irregular crazing and wear, heavier at the shoulder fold. NOT a regular diamond quilt and NOT a lattice; both have come back from generators and both are wrong.
Method	STIFFENED CLOTH — ribbed, quilted or pleated, holding its shape by construction rather than by material. Interface or pad it from the inside. NOT leather, NOT printed, NOT a bought pauldron: a sourcing guide written from photographs alone recommended an Etsy leather pauldron, and that is the single most wrong thing it is possible to buy for this costume.

From the specification: STIFFENED CLOTH — ribbed, quilted or pleated, holding its shape by construction. NOT leather, NOT printed, NOT a bought pauldron. A sourcing guide written from photographs alone recommended an Etsy leather pauldron; that is the single most wrong thing it is possible to buy for this costume. Sharp upswept point at each shoulder, warm dark brown, rising at the back into the stand collar.

2. Forearm bracers

Made ×2. *Not started.*

Both bracers, wrist to below the elbow, buckles on the outside of the arm. Note where they STOP — the elbow stays clear.

Size	~170 to 190 mm long on her forearm — wrist to just below the elbow, and NO FURTHER. Measure her; a bracer cut to a standard forearm runs into the elbow crease on a fine-boned 155 cm arm and stops the joint bending.
Colour	■ Dark brown leather, close to the belt but not matched to it
Finish	Genuinely worn. Darken the buckle track and the edges where a forearm rubs, leave the flats lighter.
Method	Leather, riveted, buckled — one of the few places on this costume where leather is correct. Two or three buckles each, on the outside of the arm.

From the specification: Leather, riveted, buckled. FOREARM ONLY — wrist to below the elbow, not continuing up the upper arm. Dark. One of the few places leather is correct on this costume.

3. Holster — belt-mounted, her RIGHT hip

Made ×1. *Not started.*

Her RIGHT hip, which is the LEFT of this picture. Hanging from the belt down the thigh, grip up and angled forward.

Size	Hangs from the belt down the right thigh. BUILD IT AROUND THE PRINTED A180, not around a generic pistol and not before the blaster exists — the drop length is set by where her hand falls, and on a 155 cm frame a standard drop puts the grip below her reach.
Colour	■ Dark brown leather, matched to the bracers
Finish	Worn at the mouth and along the draw edge.
Method	Grip up and angled forward for a right-hand draw. She is RIGHT handed — blaster on the right, leash and pouches on the left, off the drawing side.

From the specification: Leather, hanging from the belt down the right thigh, grip up and angled forward for a right-hand draw. Built around the A180, not around a generic pistol.
